Summary

MSc Data Science graduate (Christ University) with a published IEEE paper and two analytics internships. I take raw data through cleaning, analysis and statistical testing to clear recommendations, and check data quality and metric choice before trusting a result.

Skills

Data & BI: SQL (MySQL), Microsoft Excel (Pivot Tables), Power BI, Tableau
Programming: Python (Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn), R
Analysis: Data cleaning, EDA, descriptive statistics, correlation and trend analysis, outlier detection
Modelling: Regression, classification, time-series forecasting (ARIMA, Prophet), cross-validation, GridSearchCV
Tools: Jupyter Notebook, Google Colab, Git and GitHub

Projects

Telecom Customer Churn Analysis | Python, Pandas, Scikit-learn 2026

- Cleaned 243,553 customer records (fixed invalid negative usage values in 2.5–3% of rows) and measured a 20.05% churn rate, flat across providers, regions and cohorts.
- Showed an 80%-accurate Random Forest caught zero churners; rebuilt with a leak-free pipeline, baselines and cross-validation, found ROC-AUC 0.50 and identified the data as synthetic.

House Price Analysis | Python, Scikit-learn 2026

- Analysed 21,613 King County home sales; showed location drives price per sq ft (3.9× range across 70 zipcodes), with size, build grade and waterfront next.
- Cut typical pricing error from 19% to 8% (R^2 0.70 to 0.90) by encoding zipcode as a category, log-transforming price and size, and using gradient boosting.

Loan Approval Analysis | Python, SQL, Scikit-learn

- Found that credit history drives approval across 614 applications (80% vs 8% approval; Cramér's V 0.54), while income has no visible effect.
- Wrote SQL with CTEs and window functions (RANK, NTILE); showed a one-line credit-history rule matches ML models in 5-fold CV (80.9% accuracy).

Machine Learning-Based Imputation Techniques | Published research, IEEE Xplore

- Compared 4 imputation methods × 3 classifiers on the Pima diabetes dataset (10.7% missing) with GridSearchCV and stratified CV; Random Forest classified best (F1 66.5%, AUC 0.84).
- Revisited with repeated CV: imputation choice moved F1 by ~1 point vs ±4.7 between splits; RF imputation recovered true values with 15% lower error.

Experience

Data Science Intern, Zidio Development, Bangalore May 2025 – Aug 2025

- Cleaned and validated 100K+ financial records, checking for missing values, duplicates and inconsistencies.
- Used exploratory and time-series analysis to find trends and seasonality; compared ARIMA, Prophet and LSTM forecasting models.

AI / ML Intern, CHRIST InfoTech, Pune Jan 2024 – May 2024

- Built MeetDoc, a meeting transcription tool with speaker identification and NLP summarisation of decisions and action items.

Education

M.Sc. Data Science, Christ (Deemed to be University), Pune · 73.24% 2022 – 2024

B.Sc. Statistics, Vimala College (Autonomous), Thrissur · 78.42% 2019 – 2022

Publication & Certifications

Publication: Machine Learning-Based Imputation Techniques Analysis and Study, IEEE Xplore (doc. 10739330)
